**AMENDMENT**

 Assistant Commissioner for Patents  
 Washington, D.C. 20231

Dear Sir:

In response to the Office Action mailed dated May 8, 2002, please enter the following amendments and remarks.

**In the Specification:**

Page 13, replace second paragraph, lines 9 – 18, as follows:

--It is preferred that only a minimum amount of optical carriers be used in a network. This allows the reconfigurable transmitters and receivers of each satellite to have reduced complexity and thus less weight and cost. It should be noted that the reconfigurable receiver may be any one of a Fabry-Perot filter, a wavelength division multiplexer, and a fiber grating-based optical switch. If seven satellites are used, only three optical carriers for communications between the local area network satellites need to be used for communicating in one direction. This number should be 250.00 CH for a low-interference, full duplex traffic.--
